4 TAKING PICTURES

There are two ways to compose your subject: using the monitor or with the viewfinder. Depending upon the shooting situation, there may be advantages to each method. Please refer to the printed Basic Manual for more information.

a. Taking a Picture

- Set the mode dial to **AUTO** and turn the power switch to the ON position. The monitor turns on.
- Press **■** to turn the monitor off when the monitor is on.
- Compose your subject in the viewfinder or on the monitor.

Icons representing camera settings appear on the monitor, telling you important information such as the Flash and record modes, battery life, and the number of frames remaining.

- Press the shutter button halfway.

The Digital camera confirms the focus and exposure are properly set when the green lamp lights steadily. The **fl** indicator informs you that the flash is recommended and/or recharging (when blinking); or ready to fire (when steady).

- Press the shutter button completely to take the picture. A short beep confirms your picture has been taken.

b. Zooming

This Digital camera features a zoom lens, allowing you to get closer to action, or capture wide-angle shots and get everything into the picture.

- Push the zoom lever toward **W** to zoom out and get everything into the picture.
- Pull the zoom lever toward **T** to choose telephoto shooting and get closer to the action.

c. Flash Modes

This Digital camera features multiple flash modes. Please note that not all flash modes are available depending on the shooting mode selected.

Press the **fl** button to cycle through the flash modes:

Icon	Flash Mode	Description
No indication	Auto-flash	The camera automatically decides if the flash is needed.
	Red-eye Reduction Flash	Reduces incidence of red-eye by emitting pre-flashes to shrink pupil size before firing the main flash. The strobe effect is normal operation for this mode.
fl	Fill-in Flash	The flash always fires with every picture.
fl SLOW1 , fl SLOW2 , fl SLOW	Slow Synchronization	Adjusts the flash for special situations requiring slow shutter speeds.
	Flash Off	Turns the flash off for times when flash photography is prohibited or not desired. The flash never fires.

With the shutter button depressed halfway, the flash is ready to fire when the **fl** indicator in the monitor or the orange lamp next to the viewfinder lights. When the **fl** indicator or the orange lamp is blinking, the flash is charging.

d. Number of Storable Pictures

Your digital camera can handle xD-Picture Card from 16 MB to 256 MB. The number of storable pictures depends on the image quality selected.

See the Reference Manual for complete descriptions of each recording mode and the storable frame capacity for the various resolution modes and xD-Picture Card capacities.

TIP : To find out how many frames you have left, look for the number in the lower right corner. Remember, you can always delete unwanted pictures to make room for more. (See Step 5.)

5 VIEWING AND ERASING PICTURES

With a Digital camera, you can easily view the photos you want—and delete the ones you don't.

a. Viewing Pictures

There are two ways to access the Playback mode:

- Set the mode dial to **■** and press the power switch. **OR**
- If the camera is in the shooting mode with the lens barrel extended, press the QUICK VIEW button.

The last picture taken appears in the monitor. Use **◀▶** to scroll through all the images saved on your xD-Picture Card.

When you are finished reviewing your pictures:

- Turn the power switch to the OFF position. **OR**
- To return to the shooting mode, press the QUICK VIEW button again.

b. Erasing Pictures

The beauty of digital photography is your ability to keep the photos you want, delete the rest, and reuse empty memory space to take new pictures. This Digital camera offers two ways to permanently erase unwanted digital photos:

Single-Frame Erase: Deletes only the picture currently displayed in the monitor.

Once erased, pictures cannot be restored.

- Set the mode dial to **■** and turn the power switch to the ON position.
- Use the arrow pad to display the picture you want to erase.
- Press **>Delete**.
- Press **OK** to select YES, then press **OK**.

TIP : Images can also be erased while in the "QUICK VIEW" mode described in step 5a. This makes it easy to quickly erase a picture that you just took.

All-Frame Erase: Deletes all pictures on the xD-Picture Card in one operation, except for pictures you have protected.

Once erased, pictures cannot be restored.

- Set the mode dial to **■** and turn the power switch to the ON position.
- Press **OK**, then press **OK** to select MODE MENU.
- Use **◀▶** to select the CARD tab, then press **OK** twice to access the CARD SETUP screen.
- ALL ERASE** should be highlighted. Press **OK**.
- As a safeguard, the Digital camera will ask you to select YES or NO to confirm erasing, as this process permanently deletes all unprotected pictures. Select YES and press **OK**.
